Professional Summary

Site Reliability & Production Support Engineer with 4+ years resolving critical incidents across 30,000+ servers and maintaining 99.9% uptime for enterprise clients including State Street Corporation. Combines hands-on Linux, AWS/GCP/Azure and CI/CD pipeline experience with strong cross-team communication — translating complex production issues into clear resolutions for developers, business stakeholders and end users. Built automation (Python/Bash) that cut manual troubleshooting effort by 70% and reduced MTTR by 60%.

Professional Experience

Site Reliability Engineer – Kissht | Sep 2025 – Present

- **Reduced MTTR by 60%** by implementing a unified Prometheus, Grafana and New Relic alerting stack replacing manual monitoring with proactive, threshold-based detection.
- Monitored end-to-end user journeys using Metabase, Percept, and Clarity session recordings, preventing post-release regressions.
- **Cut troubleshooting effort by 70%** by automating Python-based log analysis and optimizing Sentry log ingestion, also reducing alert noise and operational cost.
- Integrated Claude (LLM) with New Relic, Grafana and Sentry to accelerate root cause analysis, reducing manual investigation effort during incident triage and troubleshooting.
- **Coordinated 200+ feature releases, migrations and bug-fix deployments** end-to-end — validating system stability pre- and post-deployment and communicating release status across engineering and support teams.
- Conducted structured **Root Cause Analysis (RCA)** on production incidents, documenting findings for engineering teams and implementing preventive fixes to reduce recurrence.
- Executed instance refresh operations and post-change validation against defined **SLAs and SLOs**, ensuring service health and compliance after every change.

Cloud Engineer – HCLTech | Dec 2021 - Sep 2025

- Delivered **L2/L3 support for 30,000+ servers**, ensuring **99.9% uptime** while resolving **250+ monthly incidents** within SLA.
- Supported enterprise **Java/WebSphere** applications across PROD, UAT and DEV environments — triaging production issues, coordinating with development teams, and reducing release resolution time by **15%**.
- **Cut repeated incidents by 30%** by diagnosing recurring CI/CD pipeline failures and implementing permanent automation fixes — improving release reliability across the pipeline.
- Led migration of enterprise applications from on-premises to AWS, achieving **zero downtime** through phased cutover planning and validation.
- Developed **Python/Bash automation scripts** for patching, monitoring and reporting, reducing manual workload by **40%**.
- Orchestrated containerized applications using **Docker and Kubernetes**, accelerating deployment cycles by **25%**.

Key Achievements

- Achieved **10% cost savings** via Private Cloud resource optimization and idle resource clean-up automation.
- Recognized as **Performer of the Month (Jan 2025)** at **HCLTech** for contributions to reliability and automation.

Projects

- [New Relic Error Rate Alerting](#) - Built a serverless alerting pipeline (New Relic → API Gateway → AWS Lambda → Slack) delivering real-time incident open/resolved notifications within 3 minutes, eliminating the need for manual dashboard monitoring.
- [New Relic Response Time Alerting](#) - Built an APM response-time monitor enriched via New Relic GraphQL, delivering alerts within 3 minutes with chart visualization and quiet-hours logic to reduce alert fatigue and manual monitoring overhead.

Certifications

- [AWS Certified SysOps Administrator – Associate](#)
- [Oracle Cloud Infrastructure 2024 Certified Foundations Associate](#)
- [Associate Cloud Engineer](#)
- [Professional Cloud DevOps Engineer Certification](#)
- [Professional Cloud Security Engineer Certification](#)

Education

- Bachelor of Technology in Computer Science & Engineering from **Dr. A.P.J. Abdul Kalam Technical University, Lucknow**, 2020 with **Honors**.

Skills

Cloud & Infrastructure: Linux (RHEL/Ubuntu), GCP, AWS (Lambda, API-Gateway, EC2, ECS, S3), Azure, Private Cloud, Load Balancers, VM Management.

DevOps & Automation: Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions, Harness), Terraform & Ansible (exploring).

Programming & Scripting: Java, Python, Bash, SQL.

Application Support: L2/L3 Support, Java/WebSphere Applications, Apache Server, JVM Monitoring, Escalation Handling and Root Cause Analysis (RCA), SLA/SLO/SLI Definition & Tracking, Distributed Tracing, Synthetic Monitoring, On-Call Rotation.

Log & AI-Assisted Troubleshooting: Log4j & Apache Log Analysis, Claude (LLM) Integration for RCA Automation.

Security: IAM, Patch Management, Vulnerability Remediation.

Monitoring & Observability: Dynatrace, Prometheus, Grafana, ELK Stack, Splunk, New Relic (GraphQL, NRQL), Sentry.
